Quality Essay

You constantly have heard the slogans “Quality over quantity” or “Quality you can
taste” and they both hold a high value over quality. People are willing to pay a higher price
for an item or service of better quality because they are getting an improved service or a
more durable item. When I think of quality I reflect over my life and what dictates a high
quality of life. I believe there are various factors that a result in an overall better life.

For me what enhances the quality of my life is the people I surround myself with.
Whether that is family or friends I believe this shapes you to be a better version of yourself.
You should surround yourself with people that constantly make you feel joyful and push you
towards your goals. A support system is necessary in our lives and it is the way we function.
People that bring you down and give out negative energy into your life can destructively
effect you. I believe the more positivity you bring into your life the better the quality it is
going to be.

A high quality life includes having goals to achieve and having passions that drive you to
feel accomplished. A passion that I am pursing in my life is to become an engineer. The
difference between a good engineer and a great one is that the right engineer finds the
most effective way to solve the problem judging by the quality of their work; I am pursing to
become just that. An engineer of high quality is an innovative problem solver that is
educated in their field, this leads to better results by minimizing failure. For instance, if a
low quality civil engineer designs a bridge this can lead to the bridge collapsing if there is a
simple mistake made. That is why it is crucial for an engineer to be well educated and
knowledgeable in their area. A failure can result in destruction that may even harm innocent civilians. Suppose a computer engineer is designing a new code for an app, running that code and finding errors and bugs is a crucial step in ensuring that the corresponding app runs smoothly. Engineers are meant to be very detailed and precise; this is why it is so important that they earn high quality education and experience.

I am studying to be an industrial and systems engineer at the University of Florida and my responsibilities include to find the most efficient way to solve a problem. Whether that is helping an amusement park shorten their waiting times or helping a business with their budgeting strategies. Industrial engineers deal with a wide variety of problems. They have an engineers' problem solving skills, but with a business perspective. As an industrial engineering student I have taken a numerous amount of classes that I know will be useful towards my career. Gaining this knowledge through my education will make me more qualified, which explains why education is such an essential quality to have as an engineer. I believe that a good quality industrial engineer should have a great knowledge in their field and learn the role that efficiency plays in the engineering world.

Overall, to accomplish a good quality of life I believe you must have a strong support system and have goals to achieve. A healthy support system helps you become the best version of yourself in order to pursue your passion. My personal goal is to become an industrial engineer and a high quality engineer is measured by their knowledge and quality of work. However, everyone has their own goals and dreams and as long as you are trying to pursue them you dictate your own life qualities.
